Applied Vision Recognized For Quality Contributions to Emhart Glass “Project of the Year”

AKRON, OH – November 16, 2006 – Emhart Glass, the world's leading international supplier of equipment, controls and parts to the glass container industry, recently recognized Applied Vision for helping to raise the level of quality within the Veritas™ series of inspection systems.

The companies collaborated on the Veritas Quality project. They jointly identified ways of achieving higher quality standards in areas such as reducing customers' inspection costs and minimizing the number of failures in the field. It was named Emhart's "Project of the Year" for attaining the program's objectives.

Emhart's Veritas series of inspection systems incorporate Applied Vision's Genius® vision processors to perform 100 percent automatic inspections with extreme accuracy on high-speed lines.

"The technical expertise and product knowledge of Applied Vision greatly contributed to the success of our joint project," said Jeff Hartung, operations manager at Emhart Glass. "Having a supplier like Applied Vision who shares our commitment to improve and provide the highest quality products and services to our customers gives us a distinct advantage within our market. When supplier and customer share common goals and objectives and are willing to 'dig-in' and get the job done together, the sky is the limit!"

Amir Novini, president of Applied Vision, accepted the award at an event near Emhart headquarters in Zurich, Switzerland. "To receive such an award from a quality-driven company like Emhart is a major achievement. It is a testament to Applied Vision's own commitment to its customers and overall quality of its products," he said.

Applied Vision Company (www.appliedvision.com) designs and manufactures application-specific machine vision inspection systems for packaging, food and beverage containers and color printing. Applied Vision systems are sold worldwide through Original Equipment Manufacturers (OEMs), Value Added Resellers (VARs), full-service distributors and company direct.
