## **New Online Decoration Monitoring System from Applied Vision Delivers 100 Percent Inspection for Bottle Can Lines** *System will debut at METPACK 2008*

**AKRON, OH** – April 22, 2008 – Applied Vision Corporation (AVC), the leading provider of machine vision inspection systems for the container manufacturing industry, will introduce at METPACK 2008 the KromaKing® CDI, an online 100 percent decoration monitoring system for bottle can inspection.

KromaKing CDI provides 100 percent surface inspection of every bottle can on the decorator. This reduces spoilage by identifying defects as early as possible. To further reduce spoilage, sophisticated process monitoring tools indicate decoration trends, identifying potential problems like color drift before they cause defects.

KromaKing CDI also reduces hold-for-inspection expenses by delivering extremely precise, laboratory-quality color measurement on the production line. The system's true color measurement capabilities are twice as accurate as human visual capacities.

Operating automatically at high line speeds, KromaKing CDI delivers the most accurate detection available of even the slightest color defect, including color drift, registration shift, spatial or pattern defects, scumming or localized errors. It also permits tighter inspection parameters so normal process variation is tolerated without risking a high number of false rejects.

With the introduction of KromaKing CDI, Applied Vision becomes the only machine vision supplier to offer a complete line of color decoration inspection equipment for the canmaking industry. The company also offers KromaKing inspection systems for mixed label application, metal decorated sheet and two-piece lines. For more information on Applied Vision systems, visit [www.appliedvision.com](http://www.appliedvision.com).

### **About Applied Vision Corporation**

Applied Vision Corporation designs and manufactures application-specific machine vision inspection systems for packaging, food and beverage containers and color printing. Applied Vision systems are sold worldwide through Original Equipment Manufacturers (OEMs), Value Added Resellers (VARs), full-service distributors and company direct.
