Applied Vision Unveils Self-Contained Camera, Lighting and Processing Inspection System

Cyclops® can be placed at select points on can lines, making multi-lane installations simpler while saving can makers money

AKRON, OH – June 1, 2011 – The landmark Cyclops® inspection system from Applied Vision Corporation combines the forward thinking of distributive imaging technology with increased efficiency and cost-savings.

Cyclops combines imaging, lighting and processing into one compact enclosure, eliminating the need to run multiple cameras on a single processor. Line placement and installation become simpler and faster, and ultimately more affordable. Cyclops can be placed almost anywhere on a line, alerting operators of potential defects as early as possible in the manufacturing process.

Cyclops delivers proven Applied Vision inspection expertise in the most proficient, intelligent, “all-in-one” system engineered to date. Self-contained and communicating through Wi-Fi, Cyclops enables facilities to avoid the clutter and hassle of additional wiring.

With its flexible optical configuration and motorized height adjustment, Cyclops can be adjusted to accommodate product heights from .1" to 8" without costly disassembly and downtime. If repairs are necessary, the attached processing “backpack” can be easily detached and quickly replaced.

“Cyclops’ dexterity and adaptability is a departure from strictly end-of-the-line thinking,” said Amir Novini, president and CEO of Applied Vision. “It is a significant step forward in application-specific distributive imaging, and is an example of the commitment to our customers to innovate a simpler, smarter future.”

Applied Vision anticipates the Cyclops inspection system will become commercially available in early 2012. Customer inquiries in the meantime can be directed to 330.926.2222 or sales@appliedvision.com.

About Applied Vision Corporation

Applied Vision Corporation designs and manufactures application-specific machine vision inspection systems for the packaging, food and beverage container and color printing industries. Applied Vision systems are sold worldwide through original equipment manufacturers (OEMs), value-added resellers

(VARs), full- service distributors and company direct. For more information on Applied Vision's machine vision solutions, visit www.appliedvision.com.
